Kaddinghall v1.9.3

The Town Inn | 25 October 2026

Your first individual town business

Open **Businesses** to find the generic town inn: a provisional owner-manager chosen from its existing workers, staff capacity, private cash and a monthly ledger. The owner is included within the eight-person staff limit. No people or canon identities are invented.

How it works

Demand follows population, season, rest days and household wellbeing. Each worker supports six visits per day. A served visit earns 15 cp and uses 4 cp of trade supplies. Daily staff wages are 30 cp per person, including the owner, plus 20 cp upkeep. 100 cp = 1 gp. These rates are provisional.

The inn pays its own bills. Visits cover drinks and hospitality, **not extra staple meals**. Town food, timber and Treasury receive no duplicate charge. Customer wallets and supplier balances are not yet tracked. Cash may become debt; no automatic loans or bankruptcy are added.

If the proprietor retires or disappears, an eligible adult worker takes over provisionally. Without one, trading and wages pause while upkeep continues. Lodging rooms and individual guest identities are future work.

Accounts start with the upgrade

Your existing world catches up first; the inn then starts at zero. No earlier profits or bills are invented. Figures accumulate with simulated days, with the current month and latest 24 closed months shown. Manual advances affect the whole world.

Tested before packaging

75 simulation/recovery checks and 13 browser checks passed. Six simulated years preserved the existing town economy. Inn cash reconciliation, vacancies, demand limits, upgrades, pause/catch-up, save rejection, export/reload and mobile layouts were tested.

The fresh test town served 943 visits in month one: 141.45 gp revenue less 37.72 gp supplies, 72 gp wages and 6 gp upkeep = **25.73 gp operating result**. Existing towns will differ.

Install and preserve your rollback save

1. Export and keep your **v1.9.2 save**.
2. Replace **app.js and index.html together** in the same site folder.
3. Keep existing manifest/service-worker assets; do not clear site storage.
4. Reload and confirm **Running v1.9.3**. Open Businesses.
5. Check your town and export a new save.

Save schema is now 11. Older versions cannot open these new saves. Original archives and the v1.9.2 package are unchanged. This update has not been deployed by Codex. Actual historical user exports and deployed offline-cache assets were unavailable, so those remain unverified.
