Kaddinghall v1.9.2

Save Recovery & Timber Repair | 25 October 2026

Ready for installation

Created in a separate copy of v1.9.1. All seven original recovery archives remain unchanged. The update is packaged and tested; it has **not been deployed** to your live site.

What changed

Reliable debt saves. Negative Treasury balances remain recorded as debt and now reload correctly. No money is invented and no debt is erased. The Overview explains the balance.

Protected recovery. Failed loads disable simulation controls. Export preserves the original saved data, including malformed files. A valid backup import restores normal controls.

Stricter imports. Incomplete modern saves and impossible physical quantities are rejected. Migration and catch-up finish validation before writing to storage.

Working timber backlog. Raw logs now pass through the manual mill with capacity limits, 90% yield and actual fees. Old backlog has no recorded cutting type, so using the specialist-capable mill is conservative. Raw inputs also respect yard space.

Validation

51 simulation/recovery cases and 10 browser cases passed. Six simulated years retained the baseline economy at every monthly checkpoint. Debt recovery, invalid imports, families, inn staffing, clock behavior, export/import and mobile layouts were checked. Existing backlog and constrained yards intentionally behave differently after the repair.

Install without losing your town

1. Export your current save and keep that backup.
2. Replace **app.js and index.html together** in the existing site folder.
3. Keep the existing manifest, service worker and other assets.
4. Reload the same site and confirm **Running v1.9.2**.
5. Check your town and export a new save. Do not clear site storage.

Compatibility and remaining limits

Save schema remains 10. Generated saves from every recovered version were tested; real historical exports were unavailable. Older releases may reject debt saves, so retain your pre-upgrade backup. Offline caching remains unverified because the deployed manifest and service worker were not supplied. No new shops, inn economics, family features or canon changes were added.
